GAMA

A turnkey maritime autonomy solution, providing autonomous navigation and remote control.

Designed for low and high speed crewed and uncrewed vessels.

The problem

Maritime autonomy is complex and under utilised for repetitive maritime operations. Existing solutions try to be "Once size fits all".

The solution

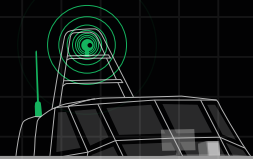

A versatile and modular autonomy control solution, with enhanced capabilities, remote controlled autonomous navigation and streamlined mission planning.

How it works

Step 1 Install the GAMA Vessel Control Unit (VCU)

Step 2 Select cameras and custom sensors or actuators

Step 3 Select a system for communications

Step 4 Select a Remote Control Unit (RCU)

Step 5 Control your vessel autonomously from anywhere
