Teradek Data

With all that's needed to manage a production, connectivity and data plans should be the last of your concerns. That's why we've created a flexible cellular solution that frees you from data throttling and data caps. You can even change your cellular carrier on-site, or in mid-production. Instead of having different plans for different SIMs, Teradek Data allows you to share your data across your whole fleet – pulling from one data bucket for much greater versatility.

WORLDWIDE COVERAGE

Take the complexity out of travel: Teradek Data's carrier list continues to grow around the world.

MULTI-CARRIER

Harness multiple carriers simultaneously and change them in as little as 30 seconds.

NO THROTTLING | NO LIMITS

We've removed the headache from carrier contracts so you can stream without artificial limits and focus on your production.

DATA SHARING

Share data across multiple devices in your fleet. Easily manage a single bucket, regardless of how much you use.

LTE AND 5G

Connect to the fastest networks around the world with Teradek or 3rd party devices.

PRIORITY DATA

Access priority cellular data to unlock exceptional connectivity for events where failure is not an option.*

*Teradek offers multiple levels of data priority.
